# Water Equipments

Made tailored to your needs

# Equipment for use and transport of water

At Officine Mottola we know that water is a precious resource, and a great deal of care goes into the construction of our water tanks. Mottola's food quality tanks are made in carbon steel and stainless steel (AISI 304 or AISI 316), and tank capacities range from 600 to 35.000 litres.

We can provide water tanks for a truck with 2, 3 or 4 axles (from 3.5 tons to 40 tons), trailers and semi-trailers.

Since the only welded joint is longitudinal, Mottola tanks are much stronger and resistant than transversally welded tanks, even in critical situations. Our tanks have several compartments to limit movement of the liquid, and all tanks have manholes for easy maintenance and access into the tank.

Standard fittings are as follows:

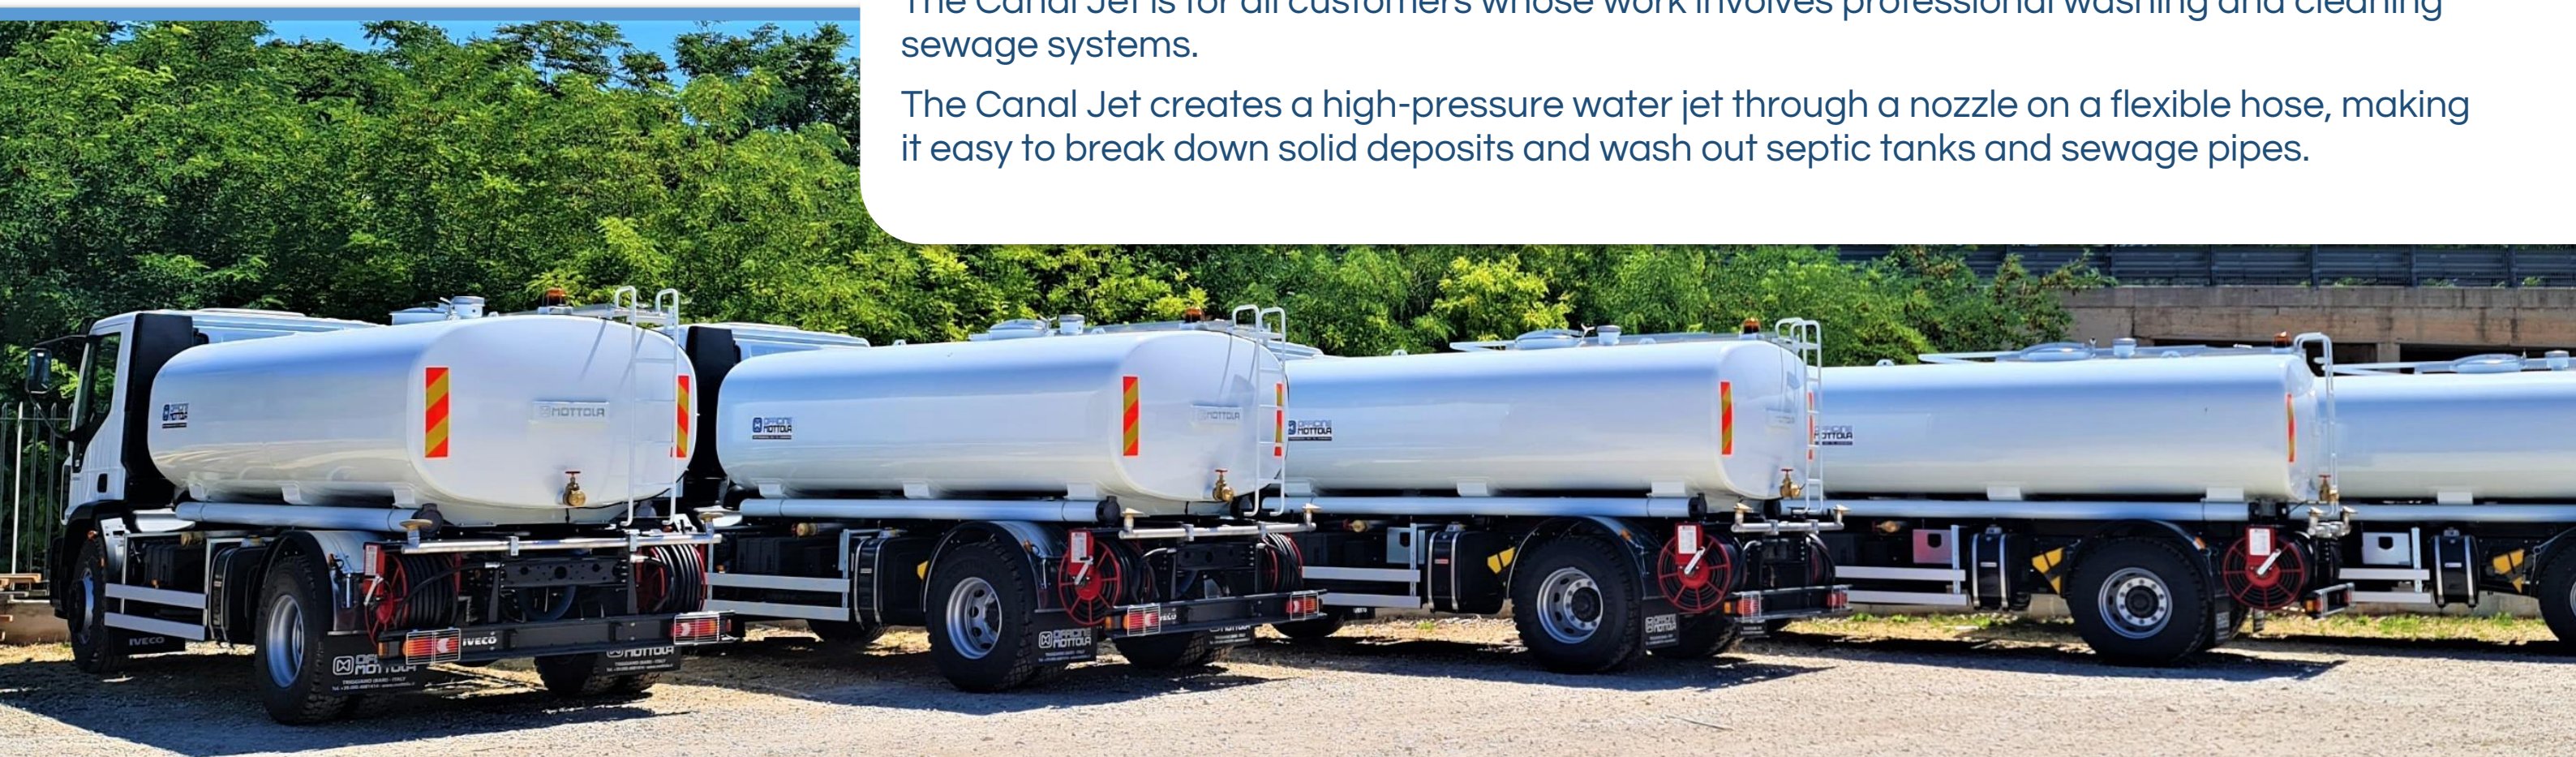

- Manhole reached via ladder,
- Foot-boards with handrail,
- Valve for over-filling and for pipes with closure valves,
- N. 2 pipe holders with lockable hatches,
- Mudguards and mud flaps for rear wheels,
- Level gauge on the front or on the rear area.

It is possible to include the **canal jet system**, consisting of a high-pressure pump piston.

The Canal Jet is for all customers whose work involves professional washing and cleaning sewage systems.

The Canal Jet creates a high-pressure water jet through a nozzle on a flexible hose, making it easy to break down solid deposits and wash out septic tanks and sewage pipes.

Mottola's water tanker is very versatile.

When fitted with a centrifugal self-priming pump connected to a front bar with spray nozzles, it can be used for sprinkling of the streets.

Centrifugal pump features (capacity and height gauge) vary according to users' requirements. The pump can be mechanical, hydraulic or driven by an auxiliary motor. We can supply the pump made of: cast iron, bronze or AISI 316 stainless steel, depending on the final use requested by the customer (industrial or potable water)

# HIGHLIGHTED DETAILS

We can also supply many other fittings to meet our customers' specific requirements

Rear bar sprinkling

Rear bar for drinking water

Lateral washing nozzle

System of centrifugal pump

Water tanks are available with our disinfectant and sanitizer system designed to cope with COVID 19

Rear fixed hose reel

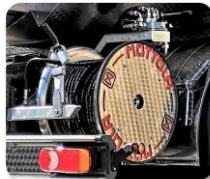

Rear hydraulic hose reel

Manual hose reel

Hydraulic hose reel

Water cannon

Mobile front washing bar

System of high pressure pump

Front bar for sprinkling
